Chapter
8

Topic-

Solar and Lunar Eclipse

13/08/20
Thursday

* New Words-

- 1) Phenomena - a significant event in nature
- 2) Astronomer - a scientist who studies the sun, moon, stars, planets, etc.
- 3) Opaque - not clear enough to allow light through, the opposite of transparent.

17/8/26

C.W.E
Monday

Answer the following questions-

1. How do we know the real reason why eclipses happen?

→ What ~~is that~~ actually happens during an eclipse has been explained by astronomers and scientists. They observed and studied eclipses and understood how these happen. Because of the work of astronomers and scientists, we now understand how they happen.

2. Give the three reasons why eclipses happen.

→ Eclipses happen for the following reasons-

- the orbit of the moon around the earth.

continuation.

- ~~The~~ orbit of the earth around the sun.
- ~~The~~ shadow that is formed when sunlight falls on an opaque object.

3. Why should we not look at the sun directly during a solar eclipse?

→ We should never look at an ~~solar~~ eclipse of the sun directly, even with dark glasses, as it can damage the eyes permanently.

4. In two sentences describe what happens during a partial lunar eclipse.

→ In a partial lunar eclipse, only a part of the moon moves into the earth's shadow. The earth's shadow appears ~~to~~ very dark.

5. Sometimes we are not able to see ~~solar~~ solar eclipses that occur. Why is this?

→ Unfortunately, sometimes because of cloudy weather or because of pollution, we are not able to see an eclipse.
