

# WILDLIFE OF INDIA

Plants  
and Animals

India's dense forests are home to many animals, birds and reptiles—some of them are **rare or endangered** while many have become **extinct**. In order to protect our wildlife, some forests are being converted into sanctuaries and parks. Answer these questions based on them, orally.

1. The Chilika Lake is Asia's largest brackish water lagoon and the largest wintering ground for migratory waterfowl, such as ducks, geese and swans. In which state is it located?
2. The Kaziranga National Park in Assam is the home of the one-horned rhinoceros, which is disappearing rapidly. On the banks of which river is it located?
3. Which national park in India has the world's largest mangrove forests?
4. When you are holidaying in Bhubaneswar, Odisha, which famous zoological park should you certainly visit?
5. Besides the tiger, which other animal would you expect to see in large numbers in Kanha National Park?
6. Which wildlife sanctuary lies on the border of India and Bhutan?
7. The Gir National Park in Gujarat is home to which animal?

## Listen and Talk

Name a few animals and birds that have become extinct. Why do creatures become extinct?

## Did You Know?

The Forest Owlet, native to India, is found in very small numbers in some parts of Maharashtra and central India. Unlike other owls which stay awake at night, this owlet is active during the day. It feeds on small animals like the grasshopper.
